

How to convert String to Date – Java

By mkyong (<https://www.mkyong.com/author/mkyong/>) | July 7, 2013 | Updated : March 10, 2017 | Viewed : 994,598 times +4,531 pv/w

In this tutorial, we will show you how to convert a String to `java.util.Date`. Many Java beginners are stuck in the Date conversion, hope this summary guide will helps you in some ways.

```
// String -> Date
SimpleDateFormat.parse(String);

// Date -> String
SimpleDateFormat.format(date);
```

Refer to table below for some of the common date and time patterns used in `java.text.SimpleDateFormat`, refer to this [JavaDoc](http://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html) (<http://docs.oracle.com/javase/8/docs/api/java/text/SimpleDateFormat.html>)

Letter	Description	Examples
y	Year	2013
M	Month in year	July, 07, 7
d	Day in month	1-31
E	Day name in week	Friday, Sunday
a	Am/pm marker	AM, PM
H	Hour in day	0-23
h	Hour in am/pm	1-12
m	Minute in hour	0-60
s	Second in minute	0-60

Note

You may interest at this [Java 8 example – How to convert String to LocalDate](http://www.mkyong.com/java8/java-8-how-to-convert-string-to-localdate/) (<http://www.mkyong.com/java8/java-8-how-to-convert-string-to-localdate/>)

1. String = 7-Jun-2013

If 3 'M', then the month is interpreted as text (Mon-Dec), else number (01-12).

```
TestDateExample1.java
```

```
package com.mkyong.date;

import java.text.ParseException;
import java.text.SimpleDateFormat;
import java.util.Date;

public class TestDateExample1 {

    public static void main(String[] argv) {

        SimpleDateFormat formatter = new SimpleDateFormat("dd-MMM-yyyy");
        String dateInString = "7-Jun-2013";

        try {

            Date date = formatter.parse(dateInString);
            System.out.println(date);
            System.out.println(formatter.format(date));

        } catch (ParseException e) {
            e.printStackTrace();
        }

    }

}
```

Output

```
Fri Jun 07 00:00:00 MYT 2013
07-Jun-2013
```

2. String = 07/06/2013

TestDateExample2.java

```
package com.mkyong.date;

import java.text.ParseException;
import java.text.SimpleDateFormat;
import java.util.Date;

public class TestDateExample2 {

    public static void main(String[] argv) {

        SimpleDateFormat formatter = new SimpleDateFormat("dd/MM/yyyy");
        String dateInString = "07/06/2013";

        try {

            Date date = formatter.parse(dateInString);
            System.out.println(date);
            System.out.println(formatter.format(date));

        } catch (ParseException e) {
            e.printStackTrace();
        }

    }

}
```

Output

```
Fri Jun 07 00:00:00 MYT 2013  
07/06/2013
```

3. String = Fri, June 7 2013

TestDateExample3.java

```
package com.mkyong.date;  
  
import java.text.ParseException;  
import java.text.SimpleDateFormat;  
import java.util.Date;  
  
public class TestDateExample3 {  
  
    public static void main(String[] argv) {  
  
        SimpleDateFormat formatter = new SimpleDateFormat("E, MMM dd yyyy");  
        String dateInString = "Fri, June 7 2013";  
  
        try {  
  
            Date date = formatter.parse(dateInString);  
            System.out.println(date);  
            System.out.println(formatter.format(date));  
  
        } catch (ParseException e) {  
            e.printStackTrace();  
        }  
  
    }  
  
}
```

Output

```
Fri Jun 07 00:00:00 MYT 2013  
Fri, Jun 07 2013
```

4. String = Friday, Jun 7, 2013 12:10:56 PM

TestDateExample4.java

```
package com.mkyong.date;

import java.text.ParseException;
import java.text.SimpleDateFormat;
import java.util.Date;

public class TestDateExample4 {

    public static void main(String[] argv) {

        SimpleDateFormat formatter = new SimpleDateFormat("EEEE, MMM dd, yyyy HH:mm:ss a");
        String dateInString = "Friday, Jun 7, 2013 12:10:56 PM";

        try {

            Date date = formatter.parse(dateInString);
            System.out.println(date);
            System.out.println(formatter.format(date));

        } catch (ParseException e) {
            e.printStackTrace();
        }

    }

}
```

Output

```
Fri Jun 07 12:10:56 MYT 2013
Friday, Jun 07, 2013 12:10:56 PM
```

5. String = 2014-10-05T15:23:01Z

Z suffix means UTC, `java.util.SimpleDateFormat` doesn't parse it correctly, you need to replace the suffix Z with '+0000'.

TestDateExample5.java

```
package com.mkyong.date;

import java.text.ParseException;
import java.text.SimpleDateFormat;
import java.util.Date;

public class TestDateExample5 {

    public static void main(String[] argv) {

        SimpleDateFormat formatter = new SimpleDateFormat("yyyy-MM-dd'T'HH:mm:ssZ");
        String dateInString = "2014-10-05T15:23:01Z";

        try {

            Date date = formatter.parse(dateInString.replaceAll("Z$", "+0000"));
            System.out.println(date);

            System.out.println("time zone : " + TimeZone.getDefault().getID());
            System.out.println(formatter.format(date));

        } catch (ParseException e) {
            e.printStackTrace();
        }

    }

}
```

Output

```
Sun Oct 05 23:23:01 MYT 2014
time zone : Asia/Kuala_Lumpur
2014-10-05T23:23:01+0800
```

In Java 8, you can convert it into a `java.time.Instant` object, and display it with a specified time zone.

TestDateExample6.java

```
package com.mkyong.date;

import java.time.*;

public class TestDateExample6 {

    public static void main(String[] argv) {

        String dateInString = "2014-10-05T15:23:01Z";

        Instant instant = Instant.parse(dateInString);

        System.out.println(instant);

        //get date time only
        LocalDateTime result = LocalDateTime.ofInstant(instant, ZoneId.of(ZoneOffset.UTC.getId()));

        System.out.println(result);

        //get date time + timezone
        ZonedDateTime zonedDateTime = instant.atZone(ZoneId.of("Africa/Tripoli"));
        System.out.println(zonedDateTime);

        //get date time + timezone
        ZonedDateTime zonedDateTime2 = instant.atZone(ZoneId.of("Europe/Athens"));
        System.out.println(zonedDateTime2);

    }

}
```

Output

```
2014-10-05T15:23:01Z
2014-10-05T15:23:01
2014-10-05T17:23:01+02:00[Africa/Tripoli]
2014-10-05T18:23:01+03:00[Europe/Athens]
```

Hi I have a requirement to convert DateofBirth, StartDate and TerminationDate fields in a file with about 100 lines. The current date format is 00.00.0000 and the requirement is 00/00/0000.

Hello Sir,
Can you please guide me here –

```
import java.util.*;
import java.text.DateFormat;
import java.text.ParseException;
import java.text.SimpleDateFormat;
```

/*Java date format issue

Input- 2016-11-23 23:38:03.850454 having milisec and nano in format
 output- 20161123233803850454 in format YYYYMMDDHHmmssSSSSSS
 my output- 201612361235213000454 which is incorrect , need help
 */

```
public class TestingDate
{
    public static void main(String[] args) throws ParseException
    {
        TestingDate obj = new TestingDate();
        System.out.println(obj.check("2016-11-23 23:38:03.850454"));
    }
    public String check(String string) throws ParseException
    {
        String dateStr = string;
        DateFormat srcDf = new SimpleDateFormat("YYYY-MM-DD HH:mm:ss.SSSSSS");
        Date date = srcDf.parse(dateStr);
        DateFormat destDf = new SimpleDateFormat("YYYYMMDDHHmmssSSSSSS");
        dateStr = destDf.format(date);
        return dateStr ;
    }
}
```

  0  [REPLY](#)

🕒 5 months 4 days ago ^

Guest

I also tried this–

```
String dateStr = "2016-11-23 23:38:03.850454";
DateFormat srcDf = new SimpleDateFormat("yyyy-MM-dd HH:mm:ss.SSSSSS");
Date date = srcDf.parse(dateStr);
DateFormat destDf = new SimpleDateFormat("yyyyMMddHHmmssSSSSSS");
dateStr = destDf.format(date);
output- 20161123235213000454 — getting zero in place of 850
I also heard about JODA api but dont know how it gona help .
```

5th example is exactly what I was looking for. But it does not cover the need "How to convert date of any format with timezone info into Instant". Example only converts strings in the format `DateTimeFormatter.ISO_INSTANT`.

How should I convert date string from http header to `java.util.Date`? I am using `DateTimeFormatter.RFC_1123_DATE_TIME`.

how do i convert the date like this 17-JUN-16 to 17-06-16

Guest

🕒 1 year 20 days ago ^

mkyong

17-JUN-16 = dd-MMM-yy

17-06-16 = dd-MM-yy

Guest

🕒 10 months 20 days ago

Akhalesh Khare

As heading says convert String to Date but while writing `formatter.format(date)` it will always return String only

Guest

🕒 1 year 4 months ago ^

mkyong

The above article is displaying the result with `formatter.format(date)`, for demonstrate only.

Guest

To convert String to Date, use `formatter.parse`

🕒 10 months 20 days ago

nocdib

Thanks. This came in handy for me!

Guest

🕒 1 year 7 months ago

jony

Hi, in your program you have `DateFormat` defined as `'dd-MMM-yyyy'` then how come 23-September-2015 is a valid date as well? I've tried setting up `lenient` to false but that still won't work, any suggestions please?

Guest

Thanks

mkyong

Z suffix means UTC, in Java 8, you can convert to Instant class directly.

Guest

```
String date = "2014-10-05T15:23:01Z";
```

```
//convert to instant directly
```

```
Instant instant = Instant.parse(date);
```

```
//convert to a specified time zone
```

```
ZonedDateTime zonedDateTime = instant.atZone(ZoneId.of("Africa/Tripoli"));
```

```
System.out.println(zonedDateTime);
```

john

How to use "Date.parse(String)" method ,please? Is the argument possible to be a string returned by Date.toString() ?

Guest

🕒 3 years 3 months ago ^

mkyong

The Date.parse(String) is desperated, DO NOT use this. Replace with SimpleDateFormat.parse(String)
